## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10, drawn to a details of a enabling pulse generator having first and second ring counter and the functional limitations associated therewith, classified in class 327, subclass 291.
  - II. Claims 11-20, drawn to input latch banks receiving enabling pulse from a enabling pulse generator, classified in class 327, subclass 141.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the enabling pulse generator utilized in the combination having different features that are different from the pulse generator of the subcombination. The subcombination has separate utility such as timing generator that requires an accurate enabling pulses.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
